

Remote service, predictive tube replacements leading to CT/MRI scans as-a-service

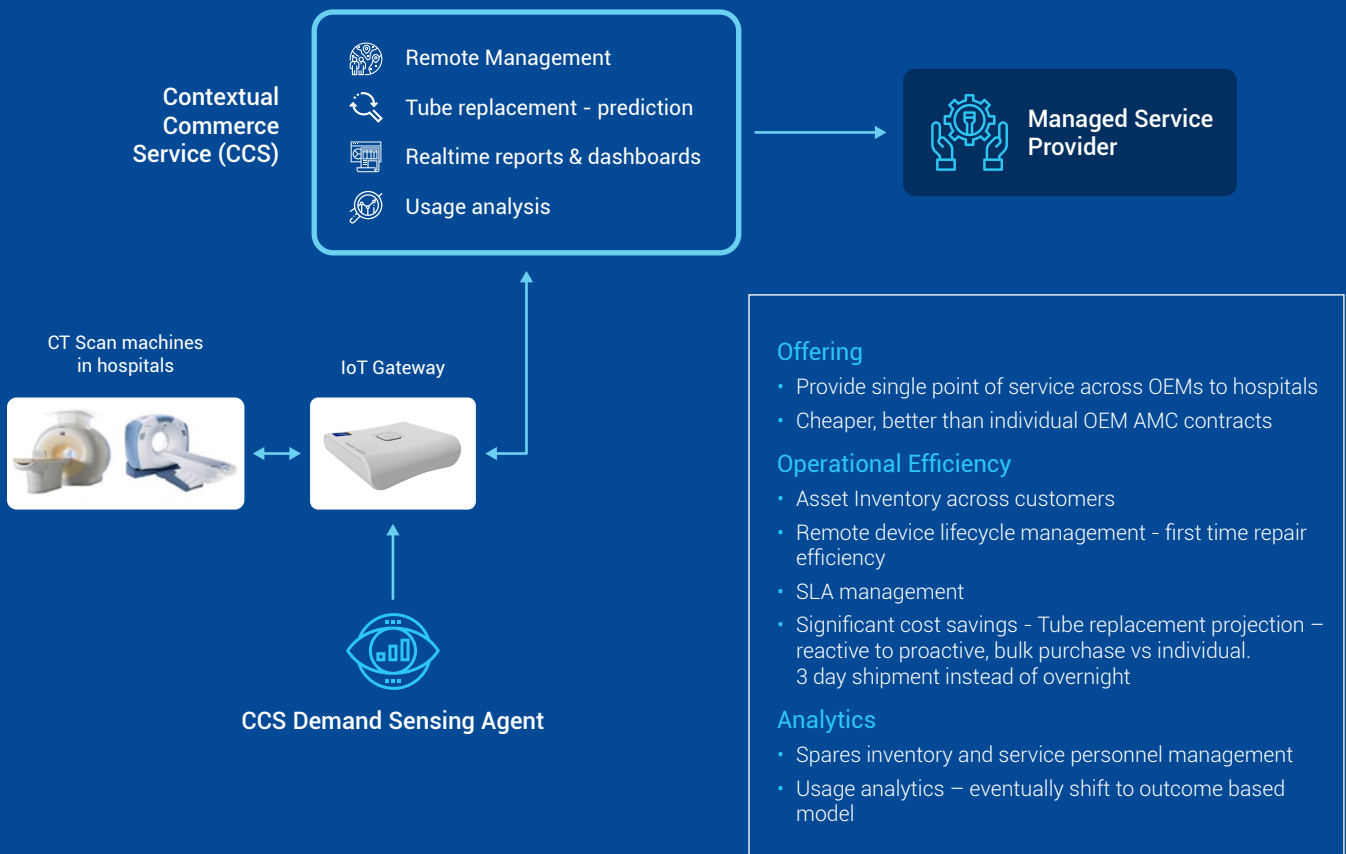

Before CCS

- Reactive service
- Few trained engineers – time, cost to perform repairs for remote locations is high
- Tubes ordered individually and shipped overnight – high cost
- Profitability and customer satisfaction issues

Post CCS

- Aggregation of predicted demand of tube replacements enabling bulk buying (discounts) and three day shipments vs overnight (cost reduction)
- Remote service – first call efficiency
- Eventually offer CT/MRI scans as a service
- Analytic insights into spares inventory, personnel management, and usage

Transform. It's now or never.
