

E-Replenishment of contrast media leading to "Injection as-a-service"

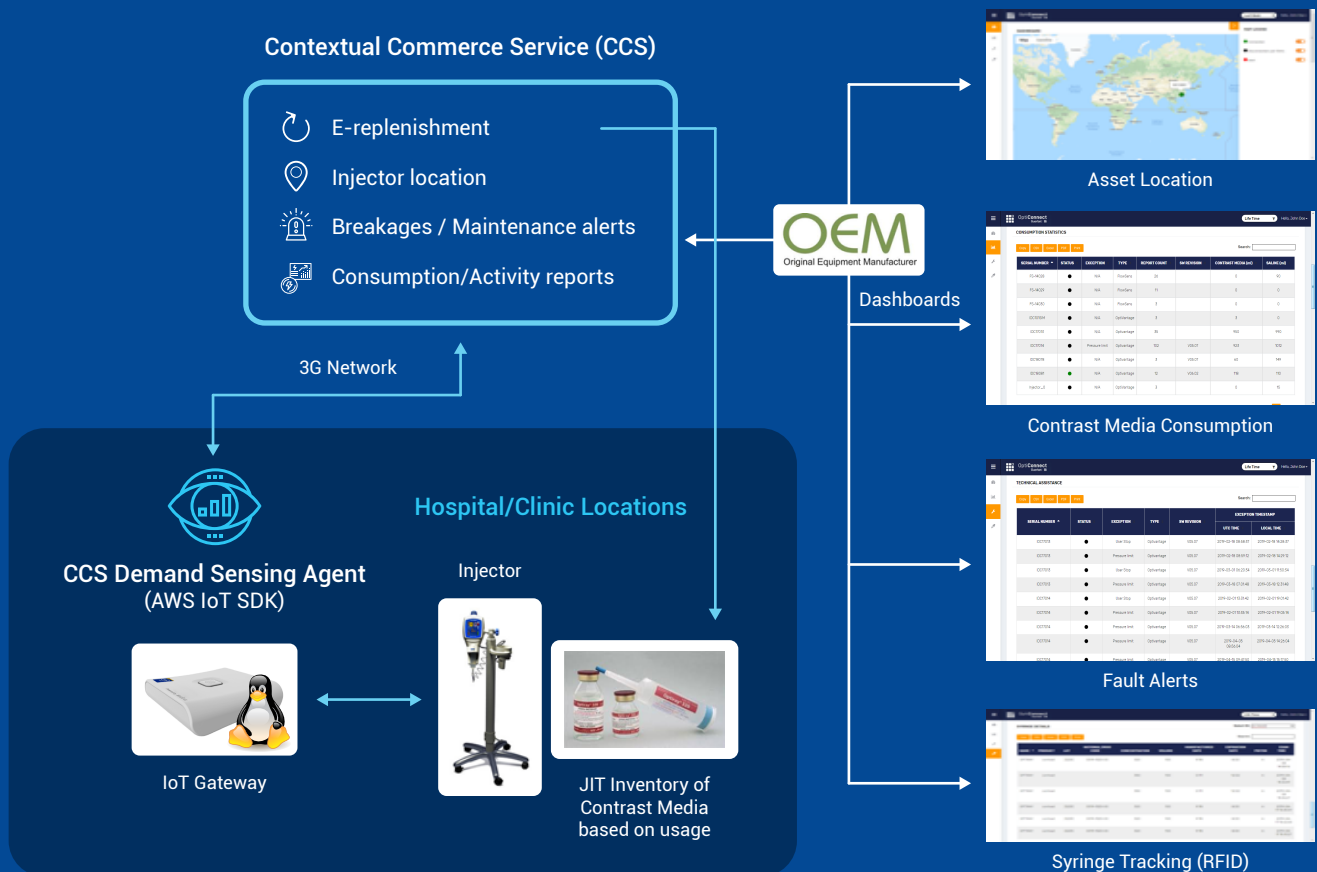

Before CCS

- No visibility of location, usage and condition of devices
- Losing aftermarket revenue of service and supplies to competition due to lack of visibility and control of devices/partners
- Reactive based on customer/partner needs

Post CCS

- Obtained full visibility of location, usage, status of devices / customers
- Offered e-Replenishment of contrast media as a service (JIT inventory based on usage)
- Demand based revenue prediction
- Remote fault detection and monitoring of MTBF/MTTR to monitor 3rd party service partners' performance
- Eventually move to an "injection as a service" business model

Transform. It's now or never.
